6:11 MINUTES

OWASP Top Ten Overview

This module will cover the Open Web Application Security Project's list of the ten most dangerous Web application security flaws.

ALL INDUSTRIES

DEVELOPERS

36:10 MINUTES

The OWASP Top Ten is a compilation of the top ten most critical application-security risks. The purpose of the list is to give developers and security teams the information they need to build secure applications, pre-proofed against the latest threats currently circulating. The list includes detailed information and best practices.

OWASP members compile the lists by examining both the occurrence rate and severity of the threat. Certain threats can appear deadly, but are easy to prevent with a little careful design, while others are potentially disastrous but rare to encounter in the wild.
